

AMR PEMCO

PROVEN PARTNER IN TECHNOLOGY

Transit & Tunneling

AMR PEMCO applies decades of underground mining experience to the transit and tunnel construction sector. Our skid-mounted power centers, electronic circuit breakers, gas detection sensors, IEEE 802.11 Wi-Fi communications, asset and personnel tracking, and collision avoidance solutions not only increase safety, but improve efficiency and productivity as well.

With over 50,000 ground monitors sold worldwide, AMR PEMCO pioneered the world's first "pilotless", also known as continuity-type, ground check monitor in 1975. We also manufacture electronic circuit breakers, which replace traditional molded case circuit breakers and significantly reduce the risk of arc flash plus offer remote reset capabilities and other advanced features. Looking for collision avoidance? Our Collision Avoidance Protection System, or CAPS, is available for both underground hard rock or any surface mining operation. In addition to our own products, we partner with other groups to provide value-added solutions.

Products

- ▶ Collision Avoidance
- ▶ Dry-Type Transformers
- ▶ E-Houses & Control Buildings
- ▶ Electrical Distribution Equipment
- ▶ Electronic Circuit Breakers
- ▶ MC-6410 Multi Gas Monitors
- ▶ Mine Net Mesh Wi-Fi Systems
- ▶ Mine Net Tracking Systems
- ▶ Remote Telemetry Units

AMR PEMCO is dedicated to providing customers with products that achieve results, improve employee safety, reduce operating costs and shorten downtime. Our domestic and international distributor network, combined with our highly trained sales, engineering, and service departments, are ready to assist customers around the clock

Delivering quality electrical solutions for over 60 years
